

## A BVxL case study

**The Riviera International Conference Centre is Torquay's premiere leisure, entertainment and conference centre with myriad facilities to satisfy the most discerning of customer. It has a large fun pool with wave machine and slides, bars and brasserie to offer fine dining, a very well equipped gym and a set of conference rooms to cater for events of all sizes and themes.**

Such a large, customer focused organisation requires finger on the pulse information for it to operate effectively and respond rapidly in a highly competitive market sector.

Having a new installation of Sage 50 to handle the accounting function, the Financial Accountant, Grace Craig, recognised that the Sage software's reporting capabilities were no match for such a dynamic business' requirements.

In early 2008 John Charlesworth, then Technical Services Manager at Blue Valleys Software and now Reporting Solutions Scotland, installed BVxL for Sage 50 and provided training and report writing support at the Riviera Centre. Working alongside Grace, a portfolio of reports was created to not only provide essential accounting reports such as balance sheets and profit and loss, but also to provide management reports for the various department heads. This enables them to view up to the minute key performance information about their areas of responsibility and so make more informed and effective business decisions.

***“BVxL has given our managers the ability to access up to the minute business information across all of their departments. This is having a tremendous positive impact on our business management and planning.”***

Riviera Centre

BVxL has provided the facility to create real time reports in the global standard of Microsoft Excel. The reports are therefore not only familiar to windows users but can be distributed throughout the organisation and beyond without compatibility problems.

The reports include dynamic filters that allow figures to be refreshed based on parameters such as department or date range, selected from a drop down menu on the report.

BVxL reports are live Excel reports and so all the power of Excel can be added to the data retrieval capabilities of BVxL. This provides unrivalled reporting power at your fingertips.
